Specialist**

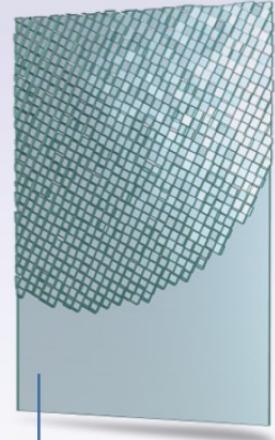

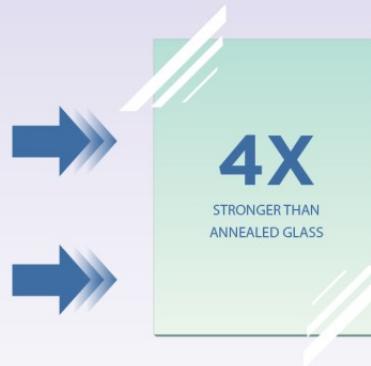

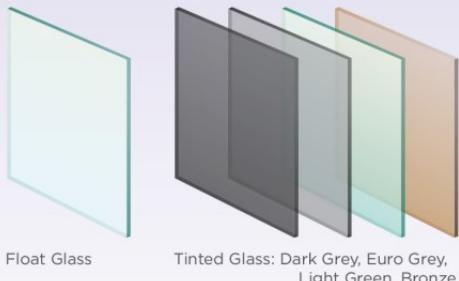

TEMPERED GLASS

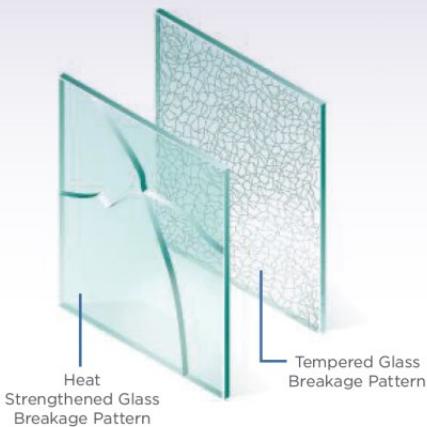

For Bending & Impact Strength

Tempered glass is an excellent choice for large expanses that maximize clear view while providing significant wind load and thermal stress resistance. When it comes to glazing selections, especially for applications required durability, strength and safety, tempered glass should be the priority choices. ENERGY Safety Glass provides consistent high quality tempered glass to meet market requirement.

TYPE OF GLASS AFTER TEMPERED

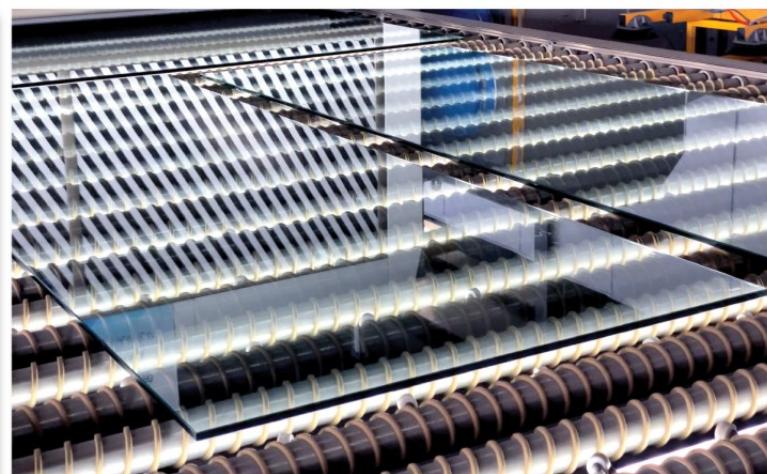

Tempered glass Break Pattern diagram

HEAT STRENGTHENED GLASS

Heat-strengthened glass is glass that has been heat-treated to have a surface compression between 3,500 and 7,500 psi (24 to 52 MPa), making it approximately twice as strong as annealed glass of the same thickness and configuration. Unlike fully tempered glass, heat-strengthened glass is not considered a safety glazing material. Or about 2 to 3 times stronger than Anneal Glass
